

Impossible Paper Trick

How to perform this trick:

1. Print this resource, or copy the lines onto plain paper by folding it into eighths first.
2. Cut along the solid lines, then fold the side flap along the darker dashed line.
3. To turn this 'possible' sheet into one that looks impossible, fold the lower section back so that it flips over. You should be left with these instructions on the front, the Pawprint Family footer on the reverse and a flap that looks impossible.
4. Impress your friends and family by showing them the end result. Can they work out the trick?
