

Walking Card Robot

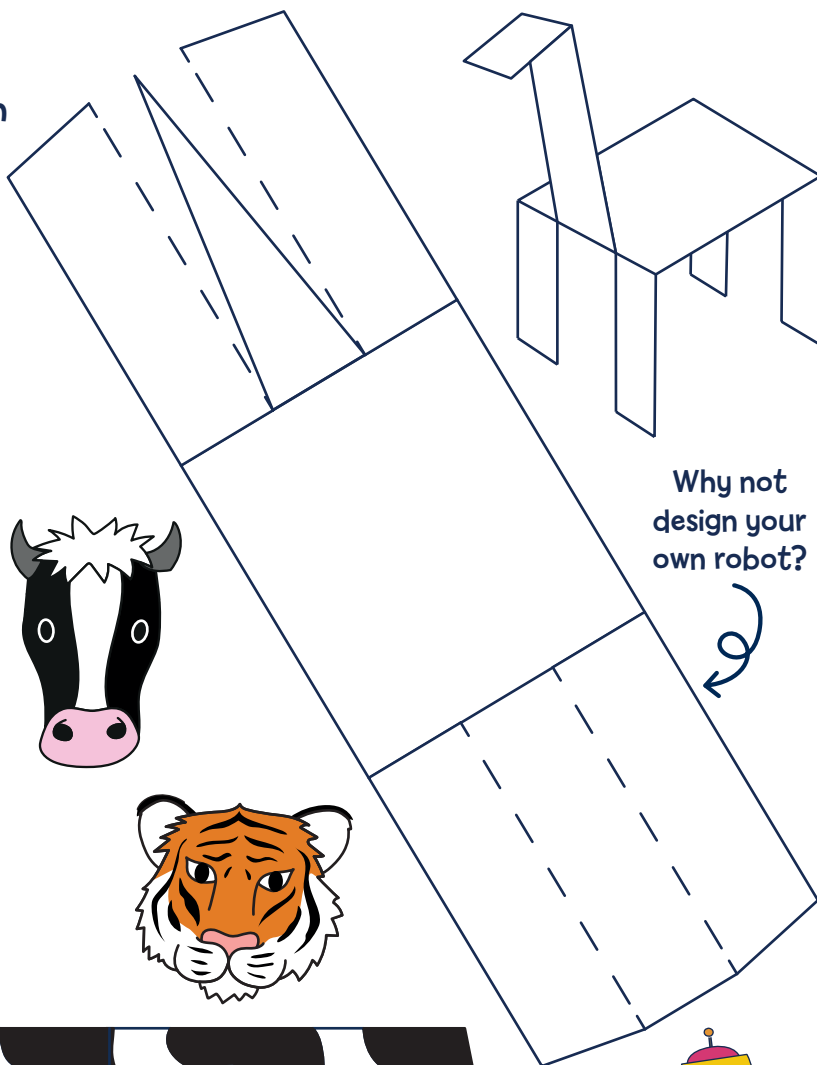

Build a group of walking robots and watch them get their steps in... on their own!

What You Need:

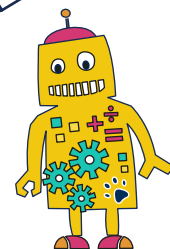

- Walking Card Robot (print on card)
- Cardboard ramp
- Pencil
- Colouring pens (optional)
- Music for your robot to strut it's stuff to

Method:

1. Print the template on card.
2. Cut around the outside of the robot's body and down the dotted lines.
3. Fold along all solid lines, shaping your robot so that it is standing up on four legs.
4. Place your robot at the top of your ramp and watch it walk down to the bottom.

Why not design your own robot?

Ramp

Make a cardboard ramp and lean/slant against a glasses case (or something of a similar height). Adjust the height to help your robot walk if needed.
